

One dataset moves the whole 16-cell vector — response is a vector, not a scalar

Component rows = Δ vs placebo (cleanreplay_s42_e4: O_acc .797, keep .481, abstain .062); bottom row = placebo Δ vs base (keep base .500, abstain base .463); base O_acc / target n/a in frozen json. Sources: batch1_scores / genre_scores / p0c_scores. Single seed arms (preregistered).
